How will it benefit our claims process?

SAM Claims Management Portal™ will save your organization time and money when processing claims, increase customer retention and satisfaction, reduce loss incurred by fraud, as well as ease accountability and compliance. SAM Claims Management Portal™ XML based Architecture will integrate with your existing claims management system seamlessly.

What is it?

SAM Claims Management Portal™ is a Microsoft SQL Server 2005 and Microsoft ASP .NET 2.0 based web application with a highly scalable Software-as-a-Service Architecture and an interoperable XML Service Oriented Architecture. SAM Claims Management Portal™ focuses on streamlining your claims processing by allowing your policy holders the ability to electronically submit actual pictures, receipts, video, and other valuable information prior to or at the time of filing a claim. Call center reps, agents, adjusters, appraisers, and accuracies will have real time ability to use that information to reduce your cost of processing the claim. Web Services will integrate data from SAM Claims Management Portal™ into your exiting claims management system, other existing backend systems, and potentially directly into your data warehouse.

“Imagine taking all of the personal property information covered by each holder’s policy and collecting it prior to a loss occurring then having the ability to use this data for predictive analysis, underwriting, and most importantly for streamlining claims processes in the event that a loss is actually incurred. This will save time and money in claims processing as well as take your claims process mobile and paperless. End users will be delighted with the proactive and customer oriented approach we allow you to take.”

This is an innovative method to monitoring fraud as well as easing data collection, compliance, and communication in the claims process. SAM Claims Management Portal™ also allows for mobile (field) workflow integration which will allows people in the field to enter and access real-time information about claims.

How does it work?

SAM Claims Management Portal™ is a web based system which your organization can host or avoid the costly hosting fees by using our Software-as-a-Service Architecture. Granular security and easy user interfaces allows for information collection that will improve your customer service and communication during the claims process.

How will policy holders, agents, adjusters, appraisers, and accuracies use it?

SAM Claims Management Portal™ is web based and requires no software for end users other than a browser, has a easy to use interface, and is accessible 24 hours a day, 365 days a year from anywhere in the world as it is a web based system. Policy holders will use SAM Asset Management Software™ which serves as a front end and will give them access to our Risk Analysis which will point out gaps in their existing policy coverage and potentially increase sales of policies.

We Empower You... To Be Innovative™

How can my organization use it?

For Small Claims Organizations

Don't worry about having your own servers and application hosting, you can use ours! Leverage our infrastructure that will allow your policy holders to securely login to a branded version of SAM Claims Management Portal™ and enter their claims related information. Your agents, adjusters, appraisers, and accuracies will be able to view information and with customization our service can be integrated into your backend systems and claims workflow with XML and Web Services.

For Medium Claims Organizations and Large in house Claims Processors

License our technology on your servers and host a branded application which can be easily integrated with existing backend systems and processes. Your clients will be able to submit detailed claims information directly on your systems.

For Large Claims Organizations servicing multiple carriers

Host your own version of SAM Claims Management Portal™. Our Software-as-a-Service (SaaS) Architecture will allow you to host multiple Insurance Carriers for claims processing on one system. We will be able to create a different interface for all Insurance Companies for which you are processing claims allowing for maximum Return on Investment as well as allow you to use your instance of SAM Claims Management Portal™ to generate a significant amount of revenue and benefit. Our security will allow agents, adjusters, appraisers, and accuracies from each carrier to view their information independently. Additionally, we can add on integration directly with your backend data warehouse for additional capabilities with predictive analysis.
